Re: Proposed Draft Air Permit
Hyperion Energy Center
Union County, South Dakota

Gentlemen:

I have reviewed your Draft Permit and found it difficult to understand in layman's terms. I would request that you publish a simplified list of permitted contaminants with anticipated yearly totals requested with your estimates of proposed limits for each.

I have the following comments and respectfully request your response for the following:

- 1) I do not believe the roads and streets within the project should remain unpaved for up to one year with the emission control systems listed.
- 2) I believe that the monitoring systems listed are not the best available as required by the EPA.
- 3) I believe that the refinery flares should be included in the recovery and monitoring systems even for "upsets".
- 4) I believe that all pipelines and transportation systems (rail, etc.) should be included in your draft permit.
- 5) I believe that the required reporting needs to be sooner than the time limits noted and an independent third party be required to verify such.

I also respectfully request that the final Air Permit be delayed until you receive an Environmental Impact Statement that you should request from an independent third party (and bill such to Hyperion as required by South Dakota law) to more fully understand the full environmental and socio-economic impact of the proposed project.

Sincerely,

Chandra Knowles

Dear Mr. Gustafson:

I am a citizen of South Dakota and resident of Union County. I hereby submit my formal comment and ask that you approve the air permit for the proposed Hyperion Energy Center in its current form without delay. I strongly believe that this project is a great opportunity for Union County, the State of South Dakota, and our nation.

Hyperion is committed to building the most advanced and environmentally sound refinery in the United States. It is disturbing that a new refinery has not been built in this country in over thirty years. The Hyperion Energy Center will be built from the ground up using new and proven emissions control technologies. I am also comforted in knowing that Hyperion will conduct ongoing monitoring during operations to ensure compliance with the permit requirements.

The economic benefit our communities will see from this project is tremendous. Thousands of new jobs, new tax revenue and tremendous growth as a result of this project will benefit all South Dakotans not to mention allowing South Dakota to take a leadership role in helping America to increase its energy security.

Thank you for your time and diligent attention to this matter.

Sincerely,

Signature
